SECTION I - INTRODUCTION

A. RISK FACTORS

Standard Risk Factors

- Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Plan will be achieved.
- Investments in Mutual Fund units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Plan invest fluctuate, the value of your investment in the Plan may go up or down.
- Past performance of the Sponsor / AMC / Mutual Fund does not guarantee future performance of the Plan.
- HFTS is the name of the Scheme and does not in any manner indicate either the quality of the Plan or their future prospects and returns.
- The Sponsor is not responsible or liable for any loss or shortfall resulting from the operation of the Scheme beyond the initial contribution of Rs 1,00,000 (Rupees One Lakh only) made by it towards setting up the Mutual Fund. The associates of the Sponsor are not responsible or liable for any loss or shortfall resulting from the operation of the Plan.
- The present Plan are not guaranteed or assured return Plan.
- Mutual funds being vehicles of securities investments are subject to market and other risks and there can be no guarantee against loss resulting from investing in the Plan. The various factors which impact the value of the Plan' investments include, but are not limited to, fluctuations in the bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws, liquidity of the underlying instruments, settlement periods, trading volumes etc.
- Investment decisions made by the AMC may not always be profitable.

Scheme Specific Risk Factors

Debt Instruments

Subject to the stated investment objective, the Scheme proposes to invest in debt and related instruments.

- There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Plan is not invested and no return is earned thereon.
- The liquidity and valuation of the Plans' investments due to its holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. Investing in close-ended schemes is more appropriate for seasoned investors. A close-ended scheme endeavors to achieve the desired returns only at the scheduled maturity of the scheme. Hence, Unit Holders who sell their Units in the Plan of the Scheme prior to maturity may not get the desired returns
- *Price-Risk or Interest Rate Risk:* As with all debt securities, changes in interest rates may affect the NAV of the Plan as the prices of securities increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities

generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.

- In the case of floating rate instruments, an additional risk could be due to the change in the spreads of floating rate instruments. If the spreads on floating rate papers rise, then there could be a price loss on these instruments. Secondly in the case of fixed rate instruments that have been swapped for floating rates, any adverse movement in the fixed rate yields vis-à-vis swap rates could result in losses. However, floating rate debt instruments which have periodical interest rate reset, carry a lower interest rate risk as compared to fixed rate debt instruments. In a falling interest rate scenario the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.
- *Liquidity or Marketability Risk:* This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market. Trading volumes, settlement periods and transfer procedures may affect the liquidity of the investments of the scheme.
- *Credit Risk:* Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk, corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk. Any losses in case of a default by an issuer will be borne by the investor. The fixed income security is also subject to credit downgrades by the rating agencies in case of deterioration of credit quality.
- *Concentration Risk:* As the debt market in India is not so matured, there is a possibility of having high exposures to single issuers. Although these exposures would be within the regulatory limits prescribed by SEBI, however they could pose additional risk to investors as the portfolio could comprise of just 4 to 5 issuers. Further, the investors could also be exposed to group level risks resulting from an aggregation of issuers associated with the same group.
- *Reinvestment Risk:* This risk refers to the interest rate levels at which cash flows received from the securities in the Plan is reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- *Benchmark Risk:* The floating rate segment of the domestic debt market is not very developed. Currently, majority of the issuance of floating rate papers is linked to NSE MIBOR. As the floating rate segment develops further, more benchmark rates for floating papers may be available in future. The fewer number of benchmark rates could result in limited diversification of the benchmark risk.

- Different types of securities in which the Plan of the Scheme would invest as given in the SID carry different levels and types of risk. Accordingly the Plans' risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- *Duration Risk:* Duration is a risk measure used to measure the bond / security price changes to potential changes in interest rates. Duration of portfolio x the expected changes in rates = the expected value change in the portfolio. Duration is more scientific measure of risk compared to average maturity of the portfolio. The higher the duration of the portfolio, the greater the changes in value (i.e. higher risk) to movement in interest rates. Modified duration is the duration of a bond / security given its current yield to maturity, put / call feature, and an expected level of future interest rates.
- *Legal, tax and regulatory risk:* The Plan could be exposed to changes in legal, tax and regulatory regime which may adversely affect it and/or the investors. Such changes could also have retrospective effect and could lead to additional taxation imposed on the Scheme which was not contemplated either when investments were made, valued or disposed off.
- The AMC and/or its empanelled distributors have not and shall not give Plan's indicative portfolio / yield in any communication or any manner, whatsoever. Investors are advised not to rely on any communication of indicative portfolio/ yield with regard to Plans' investments.
- From time to time and subject to the Regulations, the Sponsor, their affiliates, associates, subsidiaries, the Mutual Fund and the AMC may invest directly or indirectly in the Plan. These entities may acquire a substantial portion of the Plans' Units and collectively constitute a major investor in the Plan. Accordingly, redemption of Units held by such entities may have an adverse impact on the Plan because the timing of such redemption may impact the ability of other Unitholders to redeem their Units. However, such investments by Sponsor, affiliates, associates, subsidiaries, Mutual Fund or the AMC shall be in compliance with the Investment Restrictions as applicable to all investors.
- There could be cases of restructuring/re-scheduling of particular debt/money market instruments held in the portfolio which could result in the maturity of these instruments going beyond the scheme maturity date. In such cases, the Fund Manager may be constrained to sell these instruments in the market at realizable value and pass on the loss/impact to investors in the scheme.

The risks associated with the underlying assets can be described as under

- *Prepayment Risk:* The risk associated with the early unscheduled return of principal on a fixed-income security. The early unscheduled return of principal may result in reinvestment risk.

Risks associated with Listing of Units

- Listing of Units of the Plan does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the Units will develop or be maintained. Consequently, the Plan may quote below its face value / NAV. The AMC will not perform any kind of market making activity for the Units of the Plan.
- Trading in Units of the Plan on the Exchange may be halted because of market conditions or for reasons in view of the

Exchange Authorities or SEBI, rendering trading in the Units of the Plan inadvisable. In addition, trading of the Units of the Plan are subject to trading halts caused by extraordinary market volatility and pursuant to the Stock Exchange's / market regulator's 'circuit filter' rules. There can be no assurance that the requirements of the concerned Stock Exchange necessary to maintain the listing of the Units of the Plan will remain unchanged.

- Unit holders may find it difficult or uneconomical to liquidate their investments at any particular time. For Units listed on the exchange, it is possible that the market price at which the Units are traded may be at a discount to the NAV of such Units. As a result, a unit holder must be prepared to hold the Units until the maturity of the Scheme.
- The Units of the Plan may trade at a significant discount or premium on the Stock Exchange. The NAV of the Plan will fluctuate in accordance with market supply and demand as well as be affected by changes in NAV.
- *Regulatory Risk:* Any changes in trading regulations by the Stock Exchange or SEBI among other things may also result in a wider premium / discount to the NAV of the Plan. Although the Units are proposed to be listed on the Stock Exchange, the AMC and the Trustees will not be liable for any loss suffered by investors due to delay in listing of Units of the Plan on the Stock Exchange or due to connectivity problems with the depositories due to the occurrence of any event beyond their control.
- The Trustee reserves the right to list the Units of the Plan on any other recognized Stock Exchange in India, as may be deemed fit, in which case the investors may face risks related to an undeveloped market, delay in settlements etc.
- There may be acts / omissions on the part of the Stock Exchange resulting in the cancellation of Unit Holder's orders or the execution of orders on erroneous terms

Risk Factor associated with Close-ended Schemes:

Investing in close-ended Schemes is more appropriate for seasoned investors. A close-ended Scheme endeavors to achieve the desired returns only at the scheduled maturity of the Scheme. Investors who wish to exit/redeem before the scheduled maturity date may do so through the stock exchange mode, if they have opted to hold Units in a demat form. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. Hence, Unit Holders who sell their Units in a Scheme prior to maturity may not get the desired returns.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Plan. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Plan shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 6 weeks of the date of closure of the New Fund Offer.

The credit evaluation process includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as long-term financial health of the issuer. The AMC will also be guided by the ratings of rating agencies such as CRISIL, CARE and ICRA or any other rating agency as approved by the regulators.

Sectors into which the Scheme will not invest

Real estate and Airlines are identified sectors into which the Plan would not invest.

E. INVESTMENT STRATEGIES

The Plan will invest predominantly in debt and money market instruments where interest rate risk is relatively low to medium. The funds will be invested in a portfolio of debt and money market instruments maturing on or before the maturity date of the Plan. HFTS is a portfolio of securities with known maturity seeking to generate returns. As part of the portfolio strategy, there would be no security in the portfolio maturing at a date later than

the maturity date. Due to this strategy, the average maturity of the Plan under HFTS will always be equal to or lower than the tenure of the Plan. The Plan would invest only in such securities which mature on or before the date of the maturity of the Plan. However, the Fund Manager would aim to reinvest the proceeds from securities maturing closer to the maturity of the Plan. In case if reinvesting during the period closer to Plans' maturity is not viable or the opportunities are not available in the market, the money will be parked into overnight instruments.

The Plan may invest in unlisted and / or privately placed debt securities subject to the limits indicated under "Investment Restrictions for the Scheme" prescribed in this SID, from issuers of repute and sound financial standing.

The Fund may invest a part of the portfolio in various debt securities issued by corporates and / or state and central government. Such government securities may include securities which are supported by the ability to borrow from the Treasury or supported only by India's sovereign guarantee or of the state government or supported by GOI / state government in some other way.

Position of Debt Markets in India

The major players in the Indian debt markets today are banks, financial institutions, insurance companies and mutual funds. The instruments in the market can be broadly categorised as those issued by corporates, banks, financial institutions and those issued by state / central governments. The risks associated with any investment are - credit risk, interest rate risk and liquidity risk. While corporate papers carry credit risk due to changing business conditions, government securities are perceived to have zero credit risk. Interest rate risk is present in all debt securities and depends on a variety of macroeconomic factors. The liquidity risk in the corporate securities market is higher as compared to that in case of government securities. Liquidity in the corporate debt market has been improving due to the entry of more players and due to various measures taken by the regulators in this direction over a period of time. SEBI's directive of a compulsory rating by a rating agency for any public issuance over 18 months, dematerialisation, entry of private insurance companies, listing of debt securities and growth of fixed income mutual funds have enhanced liquidity in the corporate debt market. The setting up of clearing corporations, real time gross settlement and electronic clearing system for government securities have considerably enhanced the depth and width of the Indian debt markets and bringing it at par with developed markets.

The following table attempts to give a broad overview of the available instruments in the financial markets and their risk - return profile. The data is based on the market conditions as on the date of the Offer Document and may vary substantially depending upon the factors and forces affecting the securities market including the fluctuations in the interest rates.

Portfolio Turnover

Portfolio turnover is defined as lesser of purchases and sales as a percentage of the average corpus of the Scheme during a specified period of time. Investors can purchase / sell Units on a continuous basis on the National Stock Exchange of India Ltd and / or any other Stock Exchange(s) on which the Units are listed during the trading hours like any other publicly traded stock. There will be turnover only due to change in composition of portfolio of securities made as per the prevailing market conditions. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio(s).

Procedure followed for Investment Decisions

The Fund Manager(s) of the Plan are responsible for making buy / sell decisions in respect of the securities in the portfolio and to develop a well-diversified portfolio that minimizes liquidity and credit risk. The investment decisions are made on a daily basis keeping in view the market conditions and all relevant aspects.

Settlement of Purchase / Sale of Units of the Scheme on the Stock Exchange

Buying / Selling Units on the NSE is just like buying / selling any other normal listed security. If an investor has bought Units,

If an investor has sold Units, an investor has to deliver the Units to the broker / sub-broker before the securities pay-in day of the settlement cycle on the exchange. If an investor has bought Units, he should give Standing Instructions for 'Delivery-In' to his/her DP for accepting Units in his / her beneficiary account. An investor should give the details of his / her beneficiary account and the DP ID of his/her DP to his / her trading member. The trading member will transfer the Units directly to his / her beneficiary account on receipt of the same from exchange's Clearing Corporation.

An investor who has sold Units should instruct his / her Depository Participant (DP) to give 'Delivery Out' instructions to transfer the Units from his / her beneficiary account to the Pool Account of his/her trading member through whom he / she has sold the Units. The details of the Pool A/c (CM-BP-ID) of his / her trading member to which the units are to be transferred, unit quantity etc. should be mentioned in the 'Delivery Out' instructions given by him/her to the DP. The instructions should be given well before the prescribed securities pay-in day. SEBI has advised that the 'Delivery Out' instructions should be given at least 24 hours prior to the cut-off time for the prescribed securities pay-in to avoid any rejection of instructions due to data entry errors, network problems, etc.

Rolling Settlement
